

pxpipe ka poora test: Claude bill kam hua ya zyada?

@shashikant.ai · comment BILL guide · tested 8–9 Oct 2026 on my own Claude Code

0. Link + install (2 min)

Repo: github.com/teamchong/pxpipe (MIT, free) · Node.js chahiye.

Step 1: proxy chalao (ek terminal mein, chalta rehne do)

```
npx pxpipe-proxy
```

Step 2: Claude Code ko proxy se jodo (doosre terminal mein)

Mac / Linux / Git Bash:

```
ANTHROPIC_BASE_URL=http://127.0.0.1:47821 claude
```

Windows PowerShell:

```
$env:ANTHROPIC_BASE_URL="http://127.0.0.1:47821"; claude
```

Ya ek line mein (claude.ai connectors bhi chalte rehte hain): `npx pxpipe-proxy warp -- claude`

Dashboard: <http://127.0.0.1:47821/> (tokens, har photo, kill switch).

Band karna: proxy wale terminal mein Ctrl+C, aur Claude naye terminal mein bina upar wali setting ke kholo.

⚠ Hamesha **naye session** mein on karo. Chalte session ke beech on karne se cache toot jaata hai aur poori history dobara mehengi padti hai (repo issue #102).

⚠ Default sirf **Opus 5.5 aur Fable** pe kaam karta hai. Mere test mein Opus pe bill badha, toh pehle neeche wala test padh lo.

1. Trick kya hai

pxpipe (github.com/teamchong/pxpipe) ek local proxy hai. Claude Code ke rules, tools aur purani baatein text ki jagah **PNG photo** bana ke bhejta hai.

- Daava (README): bill **59–70% kam**.
- Ek developer ka naap (dev.to, 7 Oct 2026, Opus): kharcha **+196.7%**.

2. Mera setup

- Claude Code (mera account), pxpipe-proxy **v0.14.0**, local proxy `127.0.0.1:47821`
- Same folder: 50 React `.tsx` files (577 KB)
- **Chhota kaam:** "Which file renders a terminal window? Answer with the filename only." (2 baar)
- **Lamba kaam:** "Read every `.tsx` file one by one ... then output a table: file, component name, number of props."
- Har run naya session, bill = Claude Code ka apna `total_cost_usd` (list price)

3. Result: Opus 5.5 (8 Oct)

Run	Bina pxpipe	pxpipe ke saath	Farak
Chhota, pehli baar	\$0.19	\$1.46	7.6×
Chhota, doosri baar	\$0.17	\$0.25	+43%
Lamba (50 files)	\$2.27 · 57 s	\$2.51 · 135 s	+10.5%, 2.4× slow
Total	\$2.64	\$4.22	+60%

Usi waqt pxpipe dashboard: "34% fewer tokens", "Estimated saved \$4.01". Claude ne khud likha: kuch files photo mein itni saaf nahi thi, toh usne unhe dobara text mein padha.

4. Result: Fable 5.1 (9 Oct)

Run	Bina pxpipe	pxpipe ke saath	Farak
Chhota, pehli baar	\$0.40	\$0.88	2.2×
Chhota, doosri baar	\$0.065	\$0.063	−3%

Run	Bina pxpipe	pxpipe ke saath	Farak
Lamba (50 files)	\$5.44 · 90 s	\$5.03 · 165 s	–7.5%, 1.8× slow
Total	\$5.90	\$5.97	lagbhag barabar

Sahi jawab (lamba kaam): bina pxpipe 50/50. pxpipe ke saath **2 galat** (PromptTicket 17 ki jagah 15, TokenChop 18 ki jagah 17), koi error nahi.

5. Bill kyun badhta hai

- Claude ka **cache** pehle se dohraaye text ko **90% sasta** (0.1×) padhta hai.
- Har nayi photo pehli baar **cache write** hoti hai (1.25×). Naya session = naye photo = naya kharcha.
- Isliye chhote kaam / naye session mein loss, aur sirf lambe kaam mein thodi bachat (metro pass jaisa).

6. Kab try karein, kab nahi

-  **Fable** + ghanton lamba session: bachat ho sakti hai (maine sirf 2–3 min ka kaam test kiya).
-  **Opus 5.5**: mere test mein 60% mehenga.
-  Exact numbers / code values wale kaam: jawab khud check karo.
- Sonnet / Haiku: pxpipe by default inhe chhoota hi nahi.

7. Koi bhi token tool khud kaise test karein (5 min)

```
# 1. bina tool
claude -p "<same task>" --output-format json --allowedTools "Read,Glob,Grep" > base.json
# 2. tool ke saath (proxy wale tools ke liye)
ANTHROPIC_BASE_URL=http://127.0.0.1:47821 claude -p "<same task>" --output-format json --allowedTools "Read,Glob,Grep" > tool.json
# 3. asli bill compare karo
python -c "import json;print(json.load(open('base.json'))['total_cost_usd'], json.load(open('tool.json'))['total_cost_usd'])"
```

Same task, same model (`--model`), 2–3 baar. Tool ka dashboard nahi, **total_cost_usd** dekho.

8. Mera rule

Tool ka dashboard sirf andaaza hai. Asli sach sirf tumhara bill batata hai.
