# Apne aap ko Elon ke flying Roadster mein daalo — free, 3 steps (shashikant.ai)

Tested on 16 Oct 2026 on Windows (India). Reel mein jo dikha, wahi steps. Paisa zero.

## Step 1 — Apni photo se 2 stills banao (Gemini, free)

gemini.google.com kholo → "+" → Upload files → apni ek **front-facing** photo (saaf chehra, plain background best).

Phir yeh prompt paste karo (English mein hi rakho, AI English prompt better samajhta hai):

```
Create a photorealistic image. Use the uploaded photo as the exact id
```

Doosra prompt (bahar ka shot, isme chehra nahi chahiye):

```
Now create a second photorealistic image of the same scene from outsi
```

Dono images download karo. **Tip:** apna chehra kabhi words mein describe mat karo ("curly hair" etc.) — sirf "exactly as in the photo" likho, warna AI chehra badal deta hai.

## Step 2 — Image se video (free options)

Koi ek chuno:

| Tool | Free mein kya milta hai | Kab use karo |
|---|---|---|
| **Hugging Face Space** `zerogpu-aoti/wan2-2-fp8da-aoti-faster` (Wan 2.2) | Bina login 2–3 clips (832×480), phir quota; HF login se zyada | Turant test ke liye (maine isi se banaya) |

| | | |
|---|---|---|
| **Kling** kling.ai | Roz 66 free credits; 720p · 3 s ≈ 30 credits | Off-peak (subah) — peak time pe free users ko "busy" dikhata hai |
| **Dreamina / CapCut** (Seedance 2.0) | Roz free tokens, watermark | Sabse smooth motion; login chahiye |

Har shot = ek image + ek prompt. Yeh 4 prompts copy karo:

**Shot 1 — andar, button (interior still, 3–4 s)**

```
The man in the driver's seat glances at the toll plaza ahead, smirks,
```

**Shot 2 — rocket jump (exterior still, 5 s)**

```
The white sports car suddenly fires rocket thrusters: a burst of whit
```

**Shot 3 — landing (Shot 2 ka LAST frame screenshot karke image banao, 5 s)**

```
The white sports car in the sky descends with its smoke trail, lands
```

**Shot 4 — hasna (interior still, 3–4 s)**

```
The man in the driver's seat bursts out laughing, throws his head bac
```

Trick: Shot 3 ko Shot 2 ke last frame se shuru karo — car aur smoke same rehte hain, cut dikhta nahi.

## Step 3 — Jodo aur sound dalo (CapCut, phone pe)

1. Order: bahar wala still (1.5 s zoom) → Shot 1 → Shot 2 → Shot 3 → Shot 4.
2. Sound: button pe "click", launch pe "whoosh", landing pe "impact", end pe "crowd wow" — sab CapCut ke free sound library mein hain. Niche ek halki music bed.
3. Export 1080×1920. Text sirf last 2 second mein.

## Catch kya hai (honest)

- Free = 480p–720p aur kabhi watermark. 1080p ke liye Kling/Dreamina ka paid plan.
- Chehra 2–3 clips mein thoda drift karta hai — jo clip galat lage, dobara generate karo (seed badlo).
- Kisi aur ka chehra bina permission use mat karo — platforms ki policy hai aur India ke IT rules bhi.
- Real Roadster abhi udta nahi, demo tha; yeh sirf AI masti hai.
